Good Flight  
Good Flight

After weeks and months of rain, snow, and wind, we finally got a break in the weather for the March 7 launch. The temperatures actually reached into the low 60's - OK, maybe it was only for a couple of minutes, but it was great! There was an occasional breeze, and it's direction made flying from the rear of the High School preferable. This was fine, since the farmer's fields behind the school are not yet planted, which gave us plenty of room to recover our models.

The weather was so nice, in fact, that Mike Brubaker didn't even have to throw any of his models onto the school roof. We have come to suspect that Mike was actually engineered by the same "Skunk Works" that developed the Stealth technology - he was there one minute, and gone the next! 😊

Mark Kamide disregarded his own philosophy that says that model rockets and airplanes should never, ever leave the safe confines of the basement. He flew his beautifully finished Estes Mercury Atlas. Unfortunately it met Mr. Asphalt when it landed in the parking lot. A little glue will fix that right up. Larry Gerlach divided his time between making his wife nuts and flying some classic Estes models that are older than he is [?].

John Yost, Larry Gerlach, Daniel Feveryear, and Dale Greene manned launch control/check-in all day. We extend to them a huge "Thanks Guys!!" for letting the rest of us fly.
